PERSONAL PROJECTS

React Blog App

[Live Demo](#)

[GitHub Repo](#)

- It's objective is to display news and articles respective to the categories.
- The data to be displayed in browser is fetched using axios from backend API using express in NodeJS.
- This project includes React concepts like React Router, Hooks, States and Props. The HTML elements are written using JSX.
- Multiple reusable Functional components are created for different parts of the App.

To-Do App

[Live Demo](#)

[GitHub Repo](#)

- It's objective is to add, delete and maintain the To-Do list cards and tasks in it which can be marked as done.
- It is responsive and the cards are arranged evenly using flexbox.
- To make it dynamic, DOM functions are used in JavaScript.

Digital Clock

[Live Demo](#)

[GitHub Repo](#)

- It displays live browser's time using Date object in JavaScript and setInterval method of Window object.
- Also wakeup, lunch, nap and night time can be set from Dropdown Menu.
- The set time is displayed and message and image gets updated according to live time matching the set time.

Quiz App

[Live Demo](#)

[GitHub Repo](#)

- It's objective is to display the different UI boxes and questions with buttons. HTML, CSS and JavaScript is used in it.
- Each question has four options to choose from and it has live timer value and bar for each question.
- On completion, it asks for your name and on submitting it Saves the score in the browser's local storage which can be displayed by button.
